PROFESSIONAL SUMMARY

Computer Science Engineering student seeking to transition academic knowledge into practical industry experience. Proficient in foundational technologies including C, C++, Java, Python, and DBMS, with an interest in full-stack JavaScript development. I am an enthusiastic, quick learner who values open communication and teamwork when solving complex challenges. I am looking forward to joining a collaborative engineering team where I can apply my foundational skills and develop my capabilities.

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Java, Python
- **Full Stack:** React, Node, HTML/CSS, DBMS (SQL Plus, MongoDB)
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures, Operating Systems

CERTIFICATIONS AND INTERNSHIP

- NPTEL Certificate in Python in Data Science with 75%
- AIML Intern at Gigso India Private Limited
Duration : 4th June to 30th June 2025

PROJECTS

INCOIS: Ocean Hazard Reporting App | *JavaScript, Node.js, Python, DBMS, HTML/CSS, API/Data Integration*

- Designed for the Smart India Hackathon (SIH) under the Ministry of Earth Sciences, this full-stack Ocean Hazard Reporting Platform enables regional authorities and users to monitor and report local ocean hazards in real-time. The application features a secure, multi-role architecture tailored for different stakeholders and integrates AI-analyzed data streams to process complex environmental metrics into actionable hazard alerts. By efficiently managing live data ingestion through a robust database system, the project demonstrates strong practical applications of secure system architecture, real-time data handling, and full-stack development for critical disaster response.

Fantasy Cricket App | *HTML, React.js, Node.js, Express.js, MongoDB*

- This project is a basic Fantasy Cricket web application designed to let users create their own cricket teams based on real-world matches. Users can register or log in, select players from a predefined list stored in a database, and assign roles like Captain and Vice-Captain. Each player has a category and credit value, and users must build their team within a set credit limit. After team selection, users can view and manage their saved team. The application uses a point system to award scores to players based on their real-time performance in matches. Live match data is fetched from an external API, and player points are updated accordingly. The project helps demonstrate the fundamentals of full-stack development, user interaction, and real-time data handling.

Decentralized Agentic Federated Learning Platform For Robust Financial Fraud Detection | *Python, PyTorch, Federated Learning, Blockchain (Solidity), Cryptography, Smart Contracts, Streamlit*

- Developed a decentralized Federated Learning platform enabling multi-bank collaborative financial fraud detection without exposing sensitive customer data. The system features a PyTorch-based AI engine with differential privacy and a Universal Dataset Adapter that normalizes diverse transaction logs into a standard 17-feature schema. By integrating blockchain smart contracts and autonomous security agents to block malicious updates, the project achieves highly accurate and secure global model aggregation in a trustless environment.

EDUCATION

Madras Institute of Technology, Chennai

B.E Computer Science and Engineering

2023-2027

CGPA: 8.49/10

A.M.M Matriculation Higher Secondary School, Kotturpuram, Chennai

Class XII - State Board

2009-2023

Score: 557/600 (92.8%)

NON TECHNICAL SKILLS AND ACHIEVEMENTS

- Played Badminton at District Level and Won the Zonal Level
- Represented MIT in Tennis at the Zonal level and won Runner Up
- Music Producer and Singer - Trained in Carnatic Music
- Participated in many Quizzes and won the Murugappa Madras Quotient Quiz
